PUBLISHABLE EXECUTIVE SUMMARY

The EEPOS collaboration platform (Figure 1) uses the ajaXplorer (<http://ajaxplorer.info>), which – as a virtual file manager – enables file sharing in a user friendly way.

This document presents the main contents and functionalities the platform and reports on its implementation and maintenance.

The purpose of the collaboration platform is to enable easy exchange of information among the EEPOS consortium members. Its implementation has been carried out by DERlab, who will also take care of its maintenance.

The access to the collaboration platform is restricted to consortium members.
